

SN Connect — HR Portal Progress Report

Report Date: March 26, 2026 **Project:** SN Connect HR Portal — Internal HR & Employee Management System **Development Period:** January 31 – March 26, 2026 (~8 weeks) **Tagline:** "Where Policy Meets Productivity" **Developer:** Ceferino, Senior AI Intern

Executive Summary

SN Connect is the company's internal HR portal — a web-based system where employees, interns, HR staff, and executives can manage day-to-day HR operations in one place. Think of it as the company's digital HR office.

Development started on **January 31, 2026** and has reached approximately **95% completion** as of March 26. The portal includes **90 fully built screens**, covers **23 functional areas** (tasks, reports, performance reviews, announcements, etc.), and serves **four types of users** — each seeing only what's relevant to their role.

Current Status: Nearly production-ready. All major features are built and working. Remaining items include connecting email notifications to all workflows, expanding automated testing, and building the mobile app.

Who Uses the Portal (and What They See)

The portal shows different screens and capabilities depending on who is logged in:

Employees

The largest user group. After logging in, employees can:

- View a **personalized dashboard** with stats, milestones, and company announcements
- Manage their **profile** and **201 file** (personal employment records)
- Track and complete assigned **tasks** (list view or drag-and-drop board)
- Submit and track **reports** with approval workflows
- View their **performance** — goals (OKRs), key metrics (KPIs), and evaluations
- Read and star **company announcements**
- Browse and bookmark **company resources** (policies, guides, documents)
- Search the **employee directory** and export it
- Submit **leave requests** and view a shared **calendar**
- Submit **invoices** with multi-currency support
- Chat with the **AI assistant** to ask HR policy questions
- Receive **notifications** with direct links to relevant items
- View their work **activity log**

Interns

A streamlined experience focused on onboarding:

- **Intern dashboard** with status and progress

- **Daily log** entries (save as draft, then submit)
- **Task list** with ability to pick up available tasks
- **Profile** management
- **Onboarding setup flow** — a step-by-step guide for first-time setup
- Access to relevant **company resources**

Admins (HR, Chief of Staff, CEO)

Full management capabilities on top of the employee view:

- **Admin dashboard** with company-wide metrics
- **Employee management** — view, edit, and manage all employee records
- **Intern management** — track intern progress and daily logs
- **Onboarding viewer** — monitor new employee onboarding status
- **Task management** — assign and track tasks across the organization
- **Report management** — review, approve, or return submitted reports
- **Performance cycles** — create review periods, manage evaluations with advanced filters
- **Announcements** — create, target (by role or department), track who has read them, view analytics, and archive old ones
- **Resources** — organize by category, set access levels, archive outdated items
- **Job postings** — create, edit, archive, and restore positions
- **Invoice management** — review submissions, manage exchange rates
- **Probation tracking** — monitor employees on probation
- **Audit logs** — view a full trail of who did what and when

Super Admins

The highest level of access, for system-wide oversight:

- **Super admin dashboard** with top-level company data
- **Payroll** — international payment processing via Wise
- **AI Knowledge Base** — manage the documents the AI assistant learns from, including version history
- **User management** — create accounts, change roles, deactivate users
- **System-wide audit logs** — complete activity history across all users
- **System health monitoring** — check if all services are running properly
- **Settings** — system-wide configuration

What the Portal Can Do — Feature Overview

1. Task Management

Employees receive tasks from admins and can also pick up available ones. Tasks can be viewed as a **list** or as a **drag-and-drop Kanban board** (To Do → In Progress → Done). Each task supports:

- Comments and discussion threads
- File attachments as **proof of completion**
- Tags and categories for organization
- Priority levels and due dates

2. Reports

A structured system for submitting and approving reports:

- Reports can have **parent-child relationships** (e.g., a weekly report containing daily sub-reports)
- Employees **submit** → Admins **review and approve** (or return with feedback)
- Built-in **analytics** showing submission trends and completion rates

3. Performance Management

A full performance review system:

- **OKRs** (Objectives and Key Results) — set goals and track progress, which updates automatically
- **KPIs** (Key Performance Indicators) — measurable metrics with rating scales
- **Review cycles** — admins create evaluation periods; employees complete self-reviews
- **Team performance views** for managers

4. Announcements

Company-wide communications:

- Can be **targeted** to specific roles or departments (e.g., "All interns" or "Marketing team only")
- Tracks **who has read** each announcement
- **Analytics dashboard** showing reach and engagement
- **Email reminders** can be sent to those who haven't read important announcements
- Users can **star/bookmark** announcements for quick reference
- Admins can **archive and restore** old announcements

5. Resources & Knowledge Library

A centralized library of company policies, guides, templates, and documents:

- Organized into **categories** (browseable, like a folder structure)
- **Access levels** — some resources are restricted to certain roles
- Users can **bookmark** and organize into personal **collections**
- Tracks **view counts** per resource

6. Employee Directory

A searchable list of all employees:

- Search by **name, department, or role**
- **Export to CSV** for spreadsheet use

7. Notifications

A notification bell in the header that alerts users to:

- New task assignments
- Report status changes (approved, returned)
- New announcements

- Performance review deadlines
- And 7 other event types Each notification links directly to the relevant item.

8. Invoices & Multi-Currency

For managing contractor and freelancer payments:

- Supports **multiple currencies** with automatic exchange rate conversion (rates updated daily)
- **Hourly billing** mode for time-based work
- Line item breakdowns

9. Onboarding

A guided process for new employees and interns:

- **Step-by-step wizard** walking through profile completion, document uploads, and checklist items
- **Progress tracking** visible to both the employee and their admin
- **Document submission** and approval workflow

10. AI Assistant

An intelligent chatbot that answers HR policy questions:

- Learns from company documents uploaded to the knowledge base
- Provides **cited answers** — pointing to the exact source document
- **Remembers conversation history** so users can ask follow-up questions
- Knowledge base supports **version history** so admins can see how documents changed over time

11. Leave Requests

Employees can request time off, view their leave balances, and track approval status.

12. Calendar

A shared calendar showing company events, with Google Calendar integration for syncing.

13. Milestones

Automatic recognition of employee milestones:

- Work anniversaries and birthdays are auto-detected
- **Banner announcements** are generated automatically
- Runs daily to check for upcoming milestones

14. Payroll (Super Admin)

International payroll processing:

- **Wise payment gateway** integration for cross-border transfers
- Multi-currency support with live exchange rates

15. Audit Trail

A detailed record of every significant action in the system:

- Who did what, when, and from where
 - Covers sensitive operations (data changes, approvals, role modifications)
 - Searchable and filterable by admins and super admins
-

Weekly Progress

Week 1 — January 31 – February 3

What happened: The project was created from scratch and the basic structure was established.

- Set up the overall project structure for managing multiple connected applications
 - Built the initial layout — sidebar navigation and top header bar
 - Connected the system to the database (Supabase)
 - Created the first drafts of all major screens for employees, admins, and super admins (dashboards, profiles, tasks, reports, announcements, directory, etc.)
-

Week 2 — February 6–11

What happened: The visual design system was established and the login system was built.

- Created the **"Titanium & Indigo"** design system (the original look and feel — later replaced with Navy & Gold)
 - Built the **login and authentication system** — secure sign-in with session management
 - Set up the reports dashboard and AI knowledge base screens
 - Established form validation rules so users see helpful error messages when filling out forms
 - Started writing automated tests
-

Week 3 — February 15–18

What happened: The security and permissions system was built, ensuring each user only sees what they should.

- Implemented **role-based access control** — the system now checks every user's role before showing any page or data
 - Set up **automated quality checks** that run every time code is submitted (catches errors before they reach users)
 - Built the **offboarding** workflow for when employees leave the company
 - Added **real-time updates** — when something changes (e.g., a new task is assigned), it appears instantly without refreshing
 - Built the **announcements system** with ability to target specific groups
 - Set up admin pages for performance reviews, reports management, and onboarding oversight
 - Built the **probation tracking** system for HR to monitor new hires
-

Week 4 — February 24

What happened: Code cleanup and stabilization before a major push.

- Consolidated all accumulated improvements
 - Prepared the codebase for the upcoming feature sprint
-

Week 5 — February 27–28

What happened: The biggest sprint of the project — virtually every feature area was built out completely in two days.

- **Dashboard** redesigned with a modern card-based layout showing role-specific stats
 - **Notifications system** — bell icon, notification center, 11 types of alerts, click to navigate directly to the relevant item
 - **Resources library** — categories, search, access levels
 - **Reports** — full submission and approval workflow, parent-child report grouping
 - **Performance** — OKRs, KPIs, review cycles, evaluations
 - **Tasks** — Kanban board view, comments, tags, task detail pages
 - **AI Knowledge Base** — document management, version history, chat interface
 - **Announcements** — publishing, analytics, read tracking
 - **Employee Directory** — search and filtering
 - **Invoices** — multi-currency with exchange rate support
 - **Onboarding** — guided setup flow
 - **Milestones** — employee milestone tracking
 - **Profile management** — for all four user types
 - **Tour system** — guided walkthrough for first-time users
 - **Dark mode** — full support across all pages
-

Week 6 — March 7–9

What happened: User experience improvements across the board.

- Connected **dashboards to real data** — stats now come from the actual database instead of sample numbers
 - Added **success/error messages** ("toast" notifications) throughout the entire portal — every action now gives clear feedback (e.g., "Task created successfully" or "Error: Please fill in all required fields")
 - Improved sorting, filtering, and data display on tables throughout the portal
 - Refined the onboarding viewer for admins
 - Fixed various navigation and layout issues across all role sections
-

Week 7 — March 15

What happened: The largest single-day feature push — new modules and significant enhancements.

- Built the **Calendar** with Google Calendar sync
- Built the **Leave Request** system
- Added **hourly billing** mode to invoices
- Added **self-assign** for tasks (employees can pick up available work)

- Completed the **document management** system
 - Added **error recovery pages** so the portal handles unexpected issues gracefully instead of showing a blank screen
 - Built **Job Postings management** for admins to create and manage career openings
 - Added **onboarding progress stepper** — a visual progress bar showing completion status
 - Fixed all broken navigation links
 - Added **CSV export** for the employee directory
 - Added **announcement email reminders** — HR can remind people who haven't read important announcements
 - Upgraded the **AI assistant** — migrated to a more capable model, added document source citations, and conversation memory
 - Added the ability to import company documents directly from **Google Drive** into the AI knowledge base
-

Week 8 — March 17–19

What happened: Complete visual rebrand and security hardening.

- **Visual rebrand** — changed the entire portal's look from "Titanium & Indigo" (gray/purple) to "**Navy & Gold**" (deep navy blue and warm gold). Changed fonts to Source Sans 3 and Lexend for a more polished appearance. Applied across every single page.
 - Built the **CompanyPulse widget** — a dashboard component showing real-time company health metrics
 - Built the **Milestones system** — automatic birthday and anniversary announcements, running on a daily schedule
 - Added **activity logs** and **audit trail** screens
 - **Secured all data endpoints** — every request is now verified for proper authentication and permissions
 - Added **help links** and **tooltip explanations** throughout the portal to guide users
 - Set up the **email delivery system** for transactional emails
 - Added intern **draft/submit workflow** — interns can save daily log entries as drafts before formally submitting
-

Week 9 — March 21–23

What happened: Advanced features and polish.

- **Performance ratings** — added rating scales for KPIs and measurement scales for OKRs
 - **Task proof system** — employees can attach files as evidence of task completion
 - **Announcement starring** — users can bookmark important announcements for quick access
 - Expanded the **audit trail** to track more types of actions
 - Improved the **employee dashboard** layout and design
 - Fixed pagination across several list views
 - Refined the CompanyPulse widget visual theme
-

Week 10 — March 26

What happened: Payment integration, data lifecycle management, and visual polish.

- Integrated **Wise payment gateway** for international payroll transfers
- Added **archive and restore** capability for announcements, job postings, and resources — items can be archived (hidden but not deleted) and restored later if needed
- **Standardized the color palette** across all pages for a consistent look and feel
- **Overhauled the admin performance page** with advanced multi-select filters for viewing employee evaluations
- Polished admin, employee, and login pages

Visual Identity — Navy & Gold

The portal follows a consistent **Navy & Gold** design theme (applied March 17):

Element	Description
Primary Color	Deep Navy Blue — used for the sidebar, headers, and key UI elements
Accent Color	Warm Gold — used for buttons, action items, and highlights
Body Font	Source Sans 3 — clean, legible font for all body text
Heading Font	Lexend — bold, modern font for titles and section headers
Dark Mode	Fully supported — users can switch between light and dark themes
Layout	Fixed sidebar on the left, header at the top, scrollable content area

Automated Background Processes

The portal includes **8 automated tasks** that run without human intervention:

Process	How Often	What It Does
New Employee Onboarding	When triggered	Automatically creates an onboarding profile when a new employee is added
Probation Check	Daily	Checks probation periods and notifies managers of upcoming expirations
Exchange Rate Update	Daily	Refreshes currency conversion rates for multi-currency invoices
AI Document Processing	When triggered	Processes newly uploaded documents so the AI assistant can answer questions about them
Late Report Check	Weekly	Identifies overdue reports and sends notifications to the responsible employees
Milestone Announcements	Daily	Detects upcoming birthdays and work anniversaries and creates announcements

Process	How Often	What It Does
Offboarding Process	When triggered	Initiates the exit workflow when an employee leaves the company
Recording Transcription	When triggered	Converts audio recordings to text (partially implemented)

Security & Access Control

Feature	What It Means
Role-based access	Each user role (employee, intern, admin, super admin) can only see and do what they're authorized for
Secure login	Industry-standard authentication with encrypted sessions stored in secure cookies
Page protection	Users are automatically redirected to the login page if they try to access pages they shouldn't see
Data-level security	Even at the database level, each user can only query their own authorized data (70+ security rules)
Verified requests	Every action (create, update, delete) verifies the user's identity and permissions before proceeding
Audit trail	Sensitive operations (role changes, data modifications, approvals) are logged with who, what, and when

Known Items to Improve

Based on a quality review conducted March 7, 2026:

Must Fix (Critical)

- Some **side panels** (used for editing records) are too narrow for forms with many fields — makes them hard to use
- Forms need better **width options** depending on complexity

Should Fix (High Priority)

- **Mobile/tablet experience** — the portal is designed for desktop screens; the sidebar and data tables don't adapt well to smaller screens
- **Accessibility** — some interactive elements need better support for screen readers and keyboard-only navigation

Partially Addressed (Medium Priority)

- ☒ Success/error messages standardized across all user roles
- ☒ Navy & Gold rebrand applied consistently everywhere

- ☒ Color palette unified across all pages (completed March 26)
- Remaining: Minor visual inconsistencies (icon sizes, spacing) between some pages

What's Still Left to Do

Item	Importance	Details
Email notifications for all events	High	The email system is set up, but not all events trigger emails yet (e.g., task assignments, report approvals)
Automated testing	High	The testing framework is in place; needs more tests written to catch bugs before they reach users
Complete form validation	Medium	Some forms have thorough validation; others need the same level of input checking
Mobile app	Low	A mobile app wrapper exists but isn't functional; the web portal works on mobile browsers in the meantime
Standup transcription	Low	The infrastructure exists but the audio-to-text pipeline isn't fully connected

Summary

Item	Status
Total Screens	90 — all built and functional
Feature Areas	23 — tasks, reports, performance, announcements, resources, notifications, invoices, onboarding, AI chat, calendar, leave, directory, milestones, payroll, jobs, documents, probation, internships, activity logs, audit trail, dashboard, profile, settings
User Roles	4 — Employee, Intern, Admin, Super Admin
Automated Background Tasks	8 — running on daily/weekly schedules or triggered by events
Database Tables	30+ — with 70+ security rules ensuring proper data access
Visual Identity	Navy & Gold — consistent across all pages with dark mode support
Security	Role-based access control, encrypted sessions, audit logging, data-level protection
International Support	Multi-currency invoices with daily exchange rate updates, Wise payment gateway
AI Assistant	Working — answers HR questions from uploaded company documents with source citations

Item	Status
Development Duration	~8 weeks (January 31 – March 26, 2026)
Overall Completion	~95%

Development Activity Over Time

Week	Date Range	Summary
1	Jan 31 – Feb 3	Project setup, initial screen layouts
2	Feb 6 – Feb 11	Design system, login system, form validation
3	Feb 15 – Feb 18	Role-based security, automated quality checks, real-time updates
4	Feb 24	Cleanup and stabilization
5	Feb 27 – Feb 28	Major sprint — all 23 feature areas fully built
6	Mar 7 – Mar 9	Connected real data, added user feedback messages everywhere
7	Mar 15	Calendar, leave requests, AI upgrade, Google Drive import, CSV export
8	Mar 17 – Mar 19	Navy & Gold rebrand, security hardening, email setup
9	Mar 21 – Mar 23	Performance ratings, task proofs, announcement bookmarks
10	Mar 26	Wise payments, archive/restore, visual polish

Report covers development activity from January 31 through March 26, 2026.
