

Wise Production Setup Instructions

Hi! This guide will help you collect the information needed to connect our SN Connect to the real Wise account for payroll processing.

Time needed: ~10 minutes

What this does: Allows our app to send employee salary payments through Wise automatically.

Important clarification:

- Wise account access is still needed for **WISE_API_KEY**, **WISE_PROFILE_ID**, and creating the actual production webhook subscription.

For the boss, the only account-specific values you need to provide are:

- **WISE_API_KEY**
- **WISE_PROFILE_ID**
- The production webhook subscription inside Wise

Step 1: Log Into Your Wise Business Account

1. Open your web browser
2. Go to: **https://transferwise.com** (or **https://wise.com**)
3. Click **Sign In** (top right)
4. Enter your Wise Business account email and password
5. Complete any 2-factor authentication (phone/app code) if prompted

☒ **You should now be in the Wise Dashboard.**

Step 2: Generate the API Token (WISE_API_KEY)

This is a special security code that allows our app to talk to Wise.

Instructions:

1. Click your **profile icon** (top right corner)
2. Select **Settings**
3. Look for a menu on the left side and find **API tokens** (or **API** section)
4. Click **Create a new token** (or **+ Add API Key**)
5. In the popup:
 - **Token name:** Enter **SN Connect Payroll**
 - **Environment:** Choose **Production** (NOT Sandbox)
 - **Permissions:** Make sure these are checked:
 - ☒ Manage transfers
 - ☒ Manage recipients/beneficiaries
6. Click **Create token**

⚠ IMPORTANT:

A long security code will appear. **Copy it immediately** and save it somewhere safe (notepad, password manager).

- **Label it:** `WISE_API_KEY`
 - ⚠ Wise will NOT show this code again — if you lose it, you'll need to create a new one
-

Step 3: Find Your Business Profile ID (WISE_PROFILE_ID)

This identifies which business profile the payments come from.

Easy Method:

1. Still in Wise Settings, look for a section called **Profile** or **Business Profile**
2. You should see a number that looks like: `123456789` or `12345678`
3. Look for text like:
 - "Profile ID: 123456789"
 - "Business ID: 123456789"
 - Or in the URL: `/profile/123456789`

Copy this number and label it: `WISE_PROFILE_ID`

Step 4: Create The Production Webhook Subscription

To receive real Wise transfer updates in the SN Connect, you must an event subscription in the Wise Business account.

Where to look

1. Stay logged in to the Wise Business account.
2. Open the Wise area for **Integrations and tools**, **Developer tools**, or **API / Webhooks**.
3. If Wise shows an environment switcher, make sure you are in **Production** and not **Sandbox**.
4. Look for a section named **Webhooks**, **Event subscriptions**, or similar.
5. Click the button to **Create**, **Add**, or **New** webhook subscription.

What to enter

- **Notification URL / Webhook URL:** `https://app.sngroup.com.au/api/webhooks/wise`
- **Events:** choose the Wise transfer status change event used by your integration

Step-by-step entry instructions

1. In the new webhook or event subscription form, find the field labeled **Notification URL**, **Webhook URL**, or **Callback URL**.
2. Paste this exact value:

```
https://app.sngroup.com.au/api/webhooks/wise
```

3. If Wise asks for a name or label, use something clear like:

```
SN Connect Payroll Webhook
```

4. In the event selection area, choose the transfer status change event used for webhook delivery.

5. Save or create the subscription.

After saving

1. Confirm the new webhook appears in the Wise webhook or event subscription list.

2. Double-check that the saved URL is exactly:

```
https://app.sngroup.com.au/api/webhooks/wise
```

3. If Wise allows you to review enabled events, confirm the transfer state/status change event is enabled.

Very Short Version

1. Open Wise Business.
2. Go to **Integrations and tools** or **Webhooks**.
3. Make sure you are in **Production**.
4. Create a new webhook subscription.
5. Paste <https://app.sngroup.com.au/api/webhooks/wise> into the webhook URL field.
6. Select the transfer status/state change event.
7. Save.

Important note

This is not sandbox-only. Sandbox and production both use the same idea:

- Sandbox: used for testing.
- Production: used for the real deployed app.

Troubleshooting

Q: I can't find the API tokens section

A: Make sure you're in **Settings** and look for "Developer" or "API" section. If still missing, contact Wise support — your account type might not have API access enabled.

Q: The API key disappeared when I navigated away

A: That's normal. If you need it again, create a new token (same process). Each token works the same way.

Q: Do I need to do this again later?

A: No. Once you give the Wise account-specific values to your developer and the webhook subscription is configured, this is usually a one-time setup.

Q: Is this safe?

A: Yes. These are locked in a secure vault on your hosting platform. Only your app can see them, and they're encrypted.

Q: Can I authorize my developer to retrieve only the webhook public key?

A: They do not need Wise account authorization just to fetch the public key. You are still the person who should create the production webhook subscription in the Wise account unless you intentionally delegate that task.

Q: Do we need to enter a webhook URL in the Wise account?

A: Yes, for real webhook delivery. That is required in production just like sandbox. The difference is that sandbox uses a test URL, while production should use your real deployed [/api/webhooks/wise](#) endpoint.
